

TELECOM CUSTOMER CHURN ANALYSIS

Customer Retention and Churn Risk Dashboard

Key Performance Indicators

Total Customers	Churned Customers	Churn Rate	Avg Monthly Charge
7,043	1,869	26.54%	\$64.76

Churn Rate by Risk Factor

Contract Type	Churn Rate	Internet Service	Churn Rate	Payment Method	Churn Rate
Month-to-month	42.7%	Fiber optic	41.9%	Electronic check	45.3%
One year	11.3%	DSL	19.0%	Mailed check	19.1%
Two year	2.8%	No internet	7.4%	Bank transfer	16.7%
				Credit card	15.2%

Key Insights

• **Contract type is the strongest predictor of churn.** Month-to-month customers churn at 42.7% — over 15x the rate of two-year contract holders (2.8%). Migrating customers to longer contracts is the single highest-impact retention lever.

• **Fiber optic users churn at more than twice the DSL rate.** Despite being a premium service (higher monthly charges), fiber optic customers churn at 41.9% vs 19.0% for DSL — suggesting pricing or service quality issues specific to this segment.

• **Electronic check payers are the highest-risk payment segment.** At 45.3% churn, they churn nearly 3x more than automatic payment users (15–17%). Nudging customers toward automatic billing could significantly reduce churn.

• **Tenure is a strong protective factor.** Churn rate drops from ~55% in the first year to under 10% after 6 years. Early-stage customers (0–12 months) need dedicated retention programs — onboarding, discounts, or loyalty incentives.

• **Senior citizens churn at 41.7%** — significantly above the overall 26.5% rate. This demographic may benefit from targeted pricing or simplified service plans.
